TOOL MEASURE INTERFACE

The Interface that makes the difference

Benefit

Fully automatic generation of the measuring routine inside the HELITRONIC TOOL STUDIO software. Complete integration of grinding and measuring machine. Saves valuable resources such as programming time and personnel. Only 3 easy process steps are needed. Take full advantage of this technology.

The Interface that makes the difference

The process in 3 simple steps

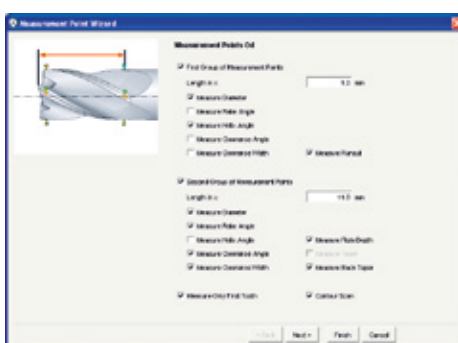

Software
HELITRONIC TOOL STUDIO

Software
Quick Check Modular

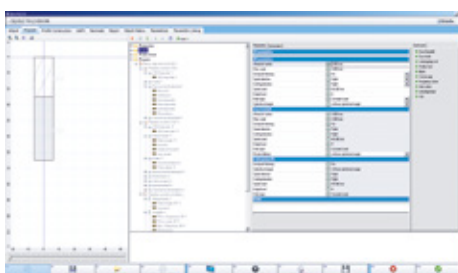

From the definition of the measuring points to the execution of the measuring program it takes only 3 simple process steps. First of all, the operator of the grinding machine defines the measuring points inside the Measurement Point Wizard within the HELITRONIC TOOL STUDIO software. Once this is done, the export of the XML-file is realized by just selecting this option from the dropdown menu. Inside the software Quick Check Modular which runs on the measuring machine, the XML-file can be easily imported thus creating a new measuring program which is then ready to be executed. This is followed by a fully automatic and user independent measurement of the tool. The final tool inspection has never been easier. Take full advantage of this technology now.

Measurement Point Wizard

- Easy selection of the parameters
- Time savings
- No programming needed

The measuring program

- Complete and ready to run
- DXF-file is included
- All measuring tasks are included
- Gets started by a simple click

The solid model

- Graphic control of the measuring points
- Quick overview

Don't think Machines, think Systems!

Benefit now from the interface that makes the difference and save time, resources and highly skilled staff. The Tool Measure Interface is available as a plugin for both, HELITRONIC TOOL STUDIO and Quick Check Modular Software. It is the best approach to improve your workflow and to take one further step into the future with WALTER.
